

Detailed Description

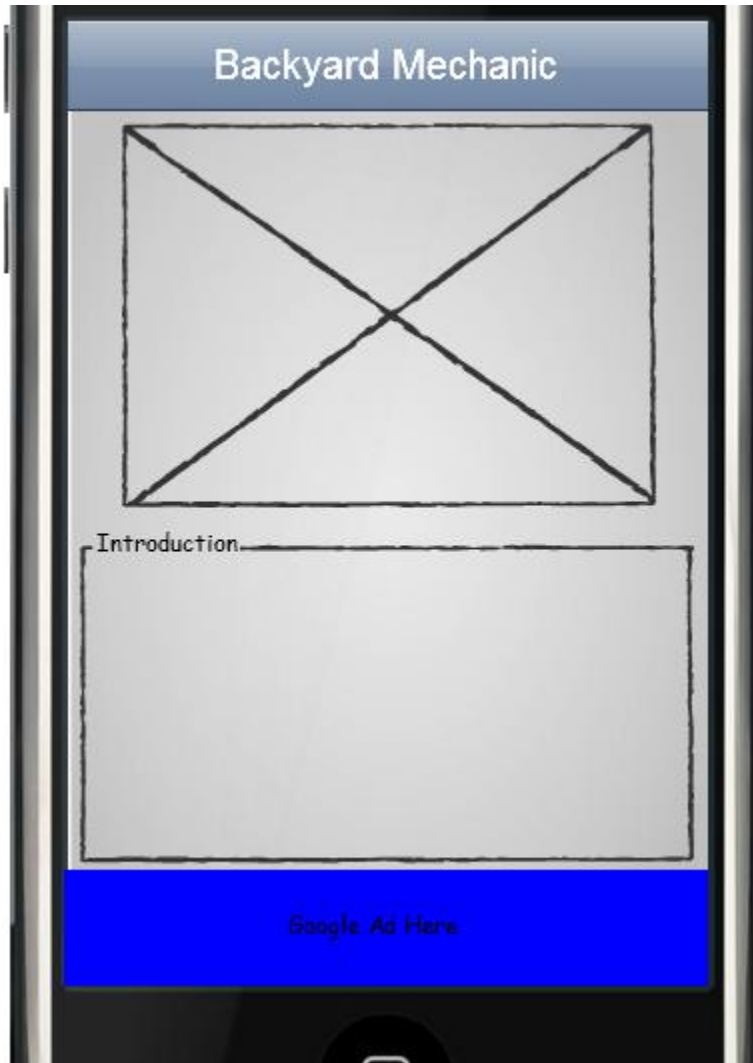

This app will allow the user to go through step-by-step instructions in various car maintenance tasks. I am basing the structure of the app off of the app "Bike Doctor".

http://www.youtube.com/watch?v=kxMRzT_y0ME&feature=player_embedded

It will resemble The Mobile Mechanic, which was recently submitted to Apple for approval.

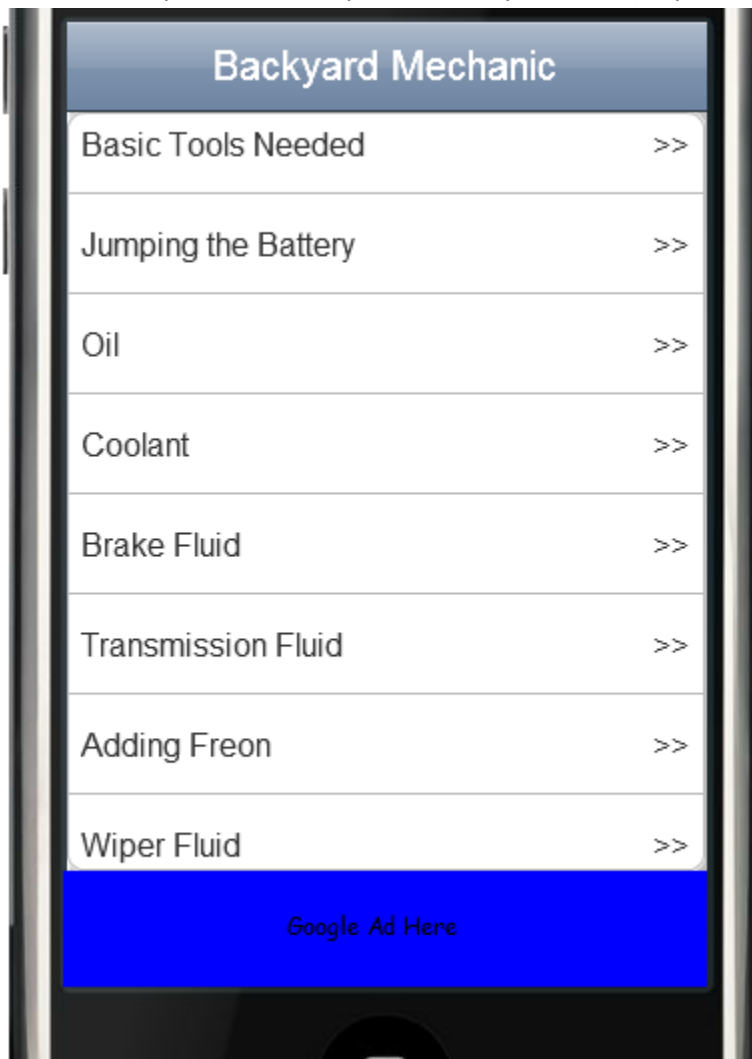

Going Through the App

1. Splash/Loading Screen – also a section that pulls data from a website (<http://www.bspif.com/apps.html>)

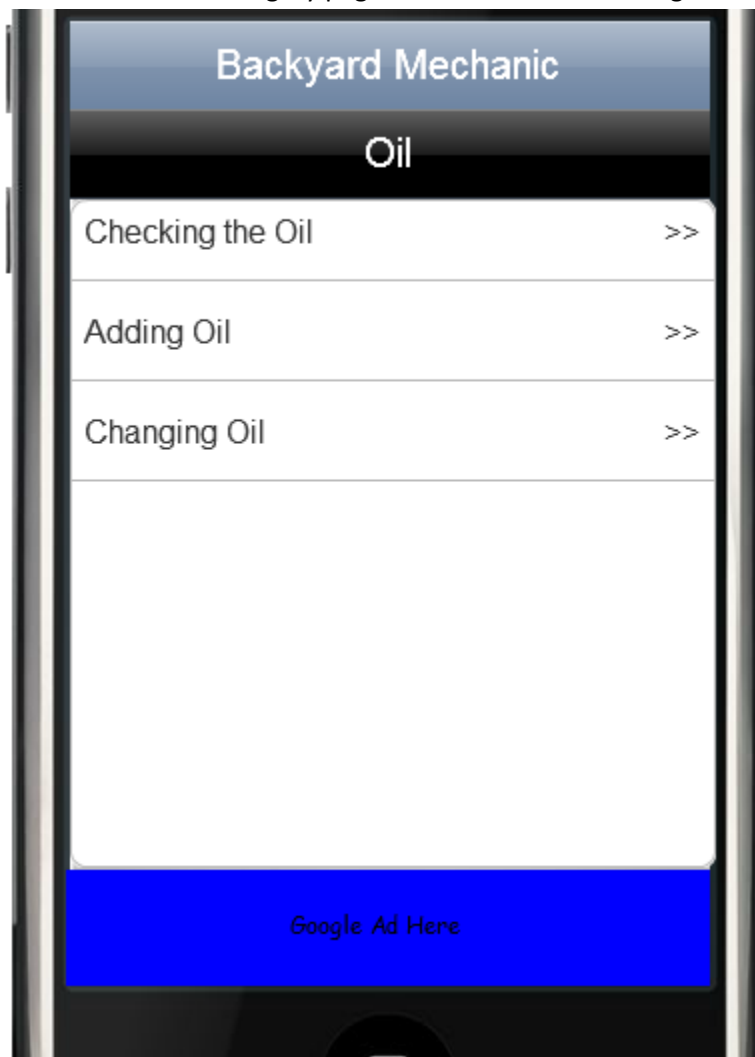

2. Home/Category Screen

There will be 11 Categories plus share through facebook and share through twitter links, as well as a link for my business that pulls off of my website. (<http://www.bspif.com/tapps.html>)

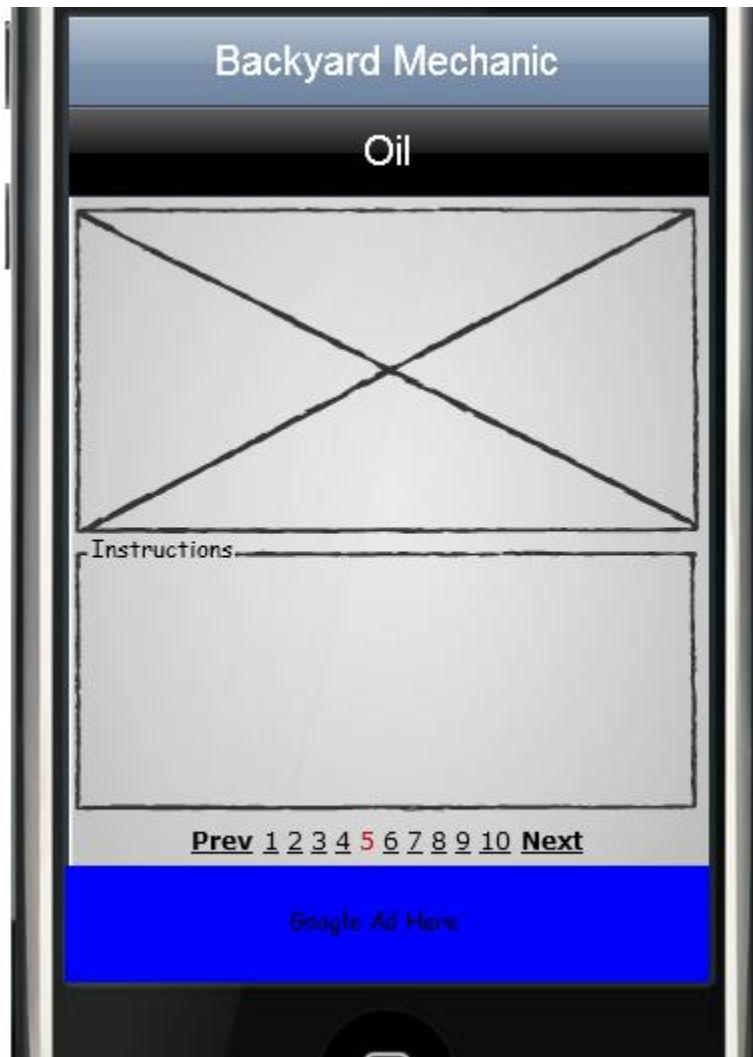

3. Sub-Category Screen (When Needed)

There will be Sub-Category pages for each of the 11 categories

4. Lesson Screens

There will be several lessons. Each lesson will be only one page.

If Android supports push-notifications, I would like to include those in the app.

This app needs to be able to go on Android phones as well as on Android tablets.

This app needs to have pics included in the download, but pull higher-quality photos from a website when it is connected to WiFi
